Event Storming — Participant Handout

We will map our business process on one wall, as a timeline of **events**. Everyone writes, everyone sticks, everything is a draft. No laptops needed.

1. The sticky legend

Sticky	It means	Write it as	Example
Event	something that happened that the business cares about	past-tense verb	*"Payment Received"*
Command	an action or intention that causes an event	imperative verb	*"Submit Order"*
Aggregate	the thing that accepts a command and emits events	noun	*"Order"*
Policy	a rule that reacts automatically	"when X, then Y"	*"When shipped, notify customer"*
Read model	information someone needs to make a decision	noun (a view / list)	*"Stock availability"*
External system	a third party or other system involved	noun	*"Payment gateway"*
Hotspot	a problem, doubt, or disagreement	a question	*"Who approves refunds?"*

2. How the notes fit together

Read model → **Command** → **Aggregate** → **Event** → **Policy** → **next Command**

Someone sees information → decides to act → the system acts → something happened → a rule reacts → the story continues.

3. Do / Don't

Do

- Write in **big letters** — readable from two meters
- One idea per sticky; write many
- Use past tense for events: "Order Placed", not "Place order"
- Stick a red hotspot instead of arguing
- Move, rewrite, or remove anyone's notes — it's a shared draft

Don't

- Don't design solutions — we map what *is*, not what should be
- Don't write nouns as events ("Invoice" → "Invoice Issued")
- Don't wait for permission to add or fix a note
- Don't debate hotspots during exploration — mark and move on
- Don't worry about duplicates — we clean up together
